DEVELOPMENT**

# DELIVERING CLIMATE COMPATIBLE DEVELOPMENT

The CDKNetwork lies at the interface of climate change and development policy. The challenge – and the exciting opportunity – is to plot a course where climate mitigation and adaptation meet poverty reduction and human development.

Climate change poses the greatest challenges to the poorest countries in the world. There is a huge demand from these countries for knowledge, research and advice which supports policy and practical action.

The CDKNetwork is a new, UK government funded programme to help decision-makers in developing countries design and deliver climate resilient development. We do this through research, advisory services and knowledge management in support of locally owned and managed policy processes.

We work in partnership with leaders from the public, private and non-governmental sectors, both nationally and internationally, to enable policy development that leads to action.

We access the very best expertise, wherever it sits in the world. In everything we do, we aim to build up the ability of our partners to work on climate and development issues.

Our vision is to become a flexible and scalable platform, reaching out to 60 countries over the next five years, and to become a global focal point for knowledge and understanding of the interface between climate change and human development.

PwC is working in alliance with ODI, SouthSouthNorth, LEAD International, Fundacion Futuro Latinoamericano, Intrac and Infosys to manage the CDKNetwork.
